COVID-19 and psychosis, depression, obsession and quality of life in Lebanese patients with schizophrenia: any changes after 5 months of quarantine?

Live Webinar – September 11, 2021

11:00 AM (EST) - 6:00 PM (Beirut)

I investigate how COVID-19 has impacted psychosis, depression, obsession and quality of life in a sample of Lebanese patients with schizophrenia after 5 months of quarantine. A cross-sectional study was performed on a sample of 190 chronic patients institutionalized for schizophrenia for more than one year at the Psychiatric Hospital of the Cross. I will present the results of this investigation.
